#### Case Study 4PAY

**Address of Headquarters** Salt Lake City, Utah, USA

#### Industry:

E-credit cards, E-loans, onlinetop ups, online payments.

#### Founders:

Neil Appalsamy, Mohamed Damji

**Founded Year:** 

2016

4PAY

#### Introduction

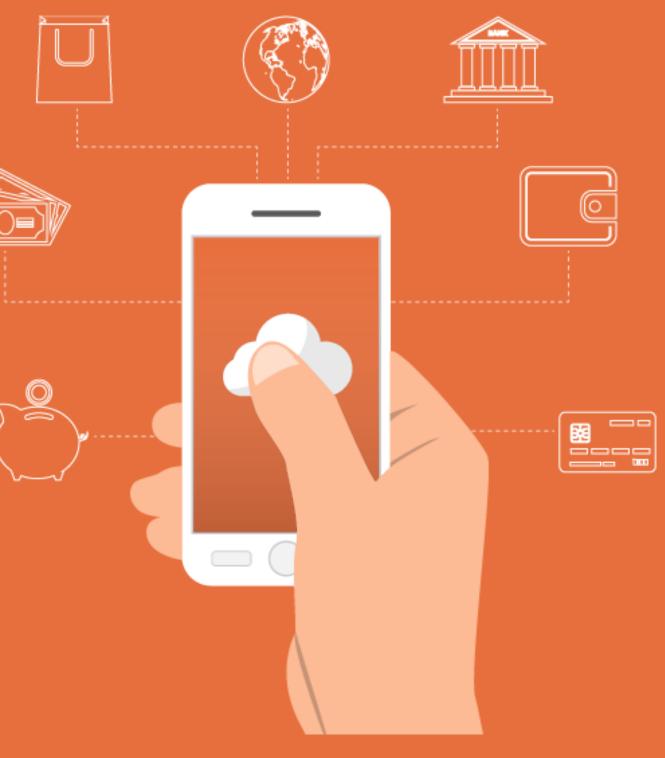

Virtualizing Bank ATM Cards so banks can rapidly deploy mobile money services for its customers.

# INCORPORATED

#### **Company Track Record**

CloudABM® Omni Channel Services CloudABM omnichannel services support traditional banking services in addition to Broker-based eCash systems, Prepaid Cards, Virtual CC (MC/Visa) and Blockchain (Ethereum) services. Whether you are building a wallet or using an existing wallet provider, CloudABM<sup>®</sup> integrates seamlessly from Google Cloud, Microsoft Azure or Amazon AWS to extend any wallet's reach over the ABM banking networks.

### CHALLENGES

Share a story on how your product or service works. Produce a quick demo video your audience can watch or share descriptive step-by-step photos.

### SOLUTION

#### **OVERALL SOLUTION IN SHORT:**

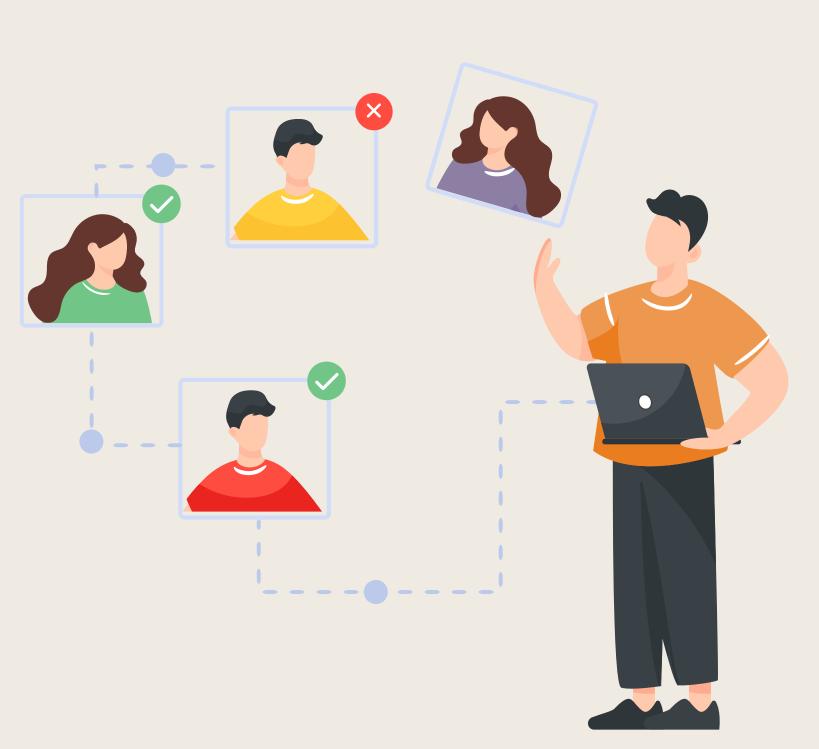

We managed to build the APIs using the existing company API documentation and by regularly coordinating with the client team. Each day the requirement would get modified and the dev team would find it difficult to tweak the existing development progress. However, after multiple efforts we were able to deploy the same. For the loan platform, the challenging part was to keep a track of the sent/received money. So the calculation logic was something which had to be properly understood.

### RESOURCES

#### HOW MANY RESOURCES WERE INVOLVED?

A team of 3 developers, 1 linux administrator and 1 project manager.

### RESULTS

#### **EXPLAIN RESULTS WITH**

- Increase in the product acquisition
- The product was being used in just 1 african country earlier. But now we are across 4 countries and pitching to be successful in more countries in the next few years.
- Vodacom Africa and Airtel are the 2 main clients that integrate our APIs on their Eloan platforms.
